

Leveraging Data as an Asset

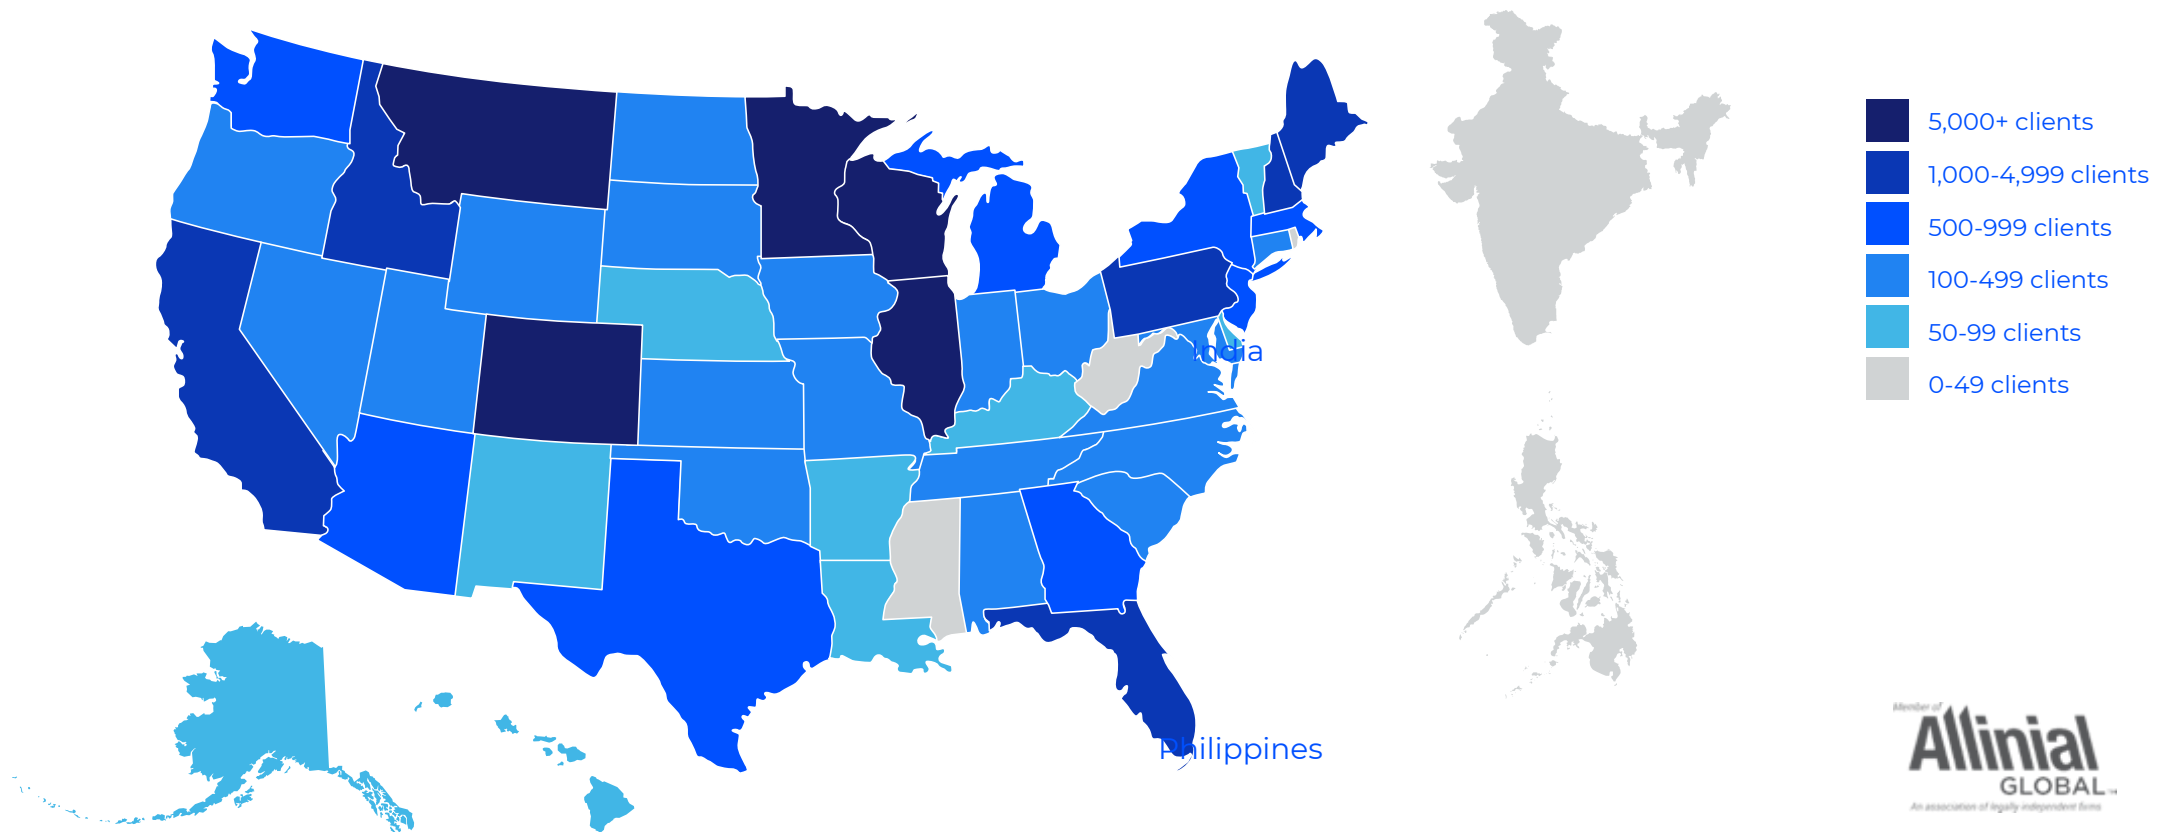

Greg Woodard

- Principal @ Wipfli
- 30+ years experience in the **data analytics, application development and database** areas
- Our team focuses on all components (and technologies) of **data transformation** including:
 - Strategy roadmaps
 - Data discovery and profiling
 - Data storage and consolidation
 - Data governance
 - Data visualization
 - Augmented Intelligence / Machine Learning

Wipfli is a top accounting and consulting firm
with more than **70,000** clients across every major
industry

Process

The background is a solid dark blue. It features a complex network of white lines connecting various rectangular boxes of different sizes and orientations. Some boxes are filled with a lighter blue color, while others are empty. Scattered throughout the background are numerous small, faint numbers in white and light blue, including 304, 10, 5, 246, 07, 076, 10, 002, 05, 01, 003, 360, and 010. There are also faint hexagonal patterns and a vertical arrow pointing upwards at the bottom center.

Data Processing

What does it take for an organization to be in the data business

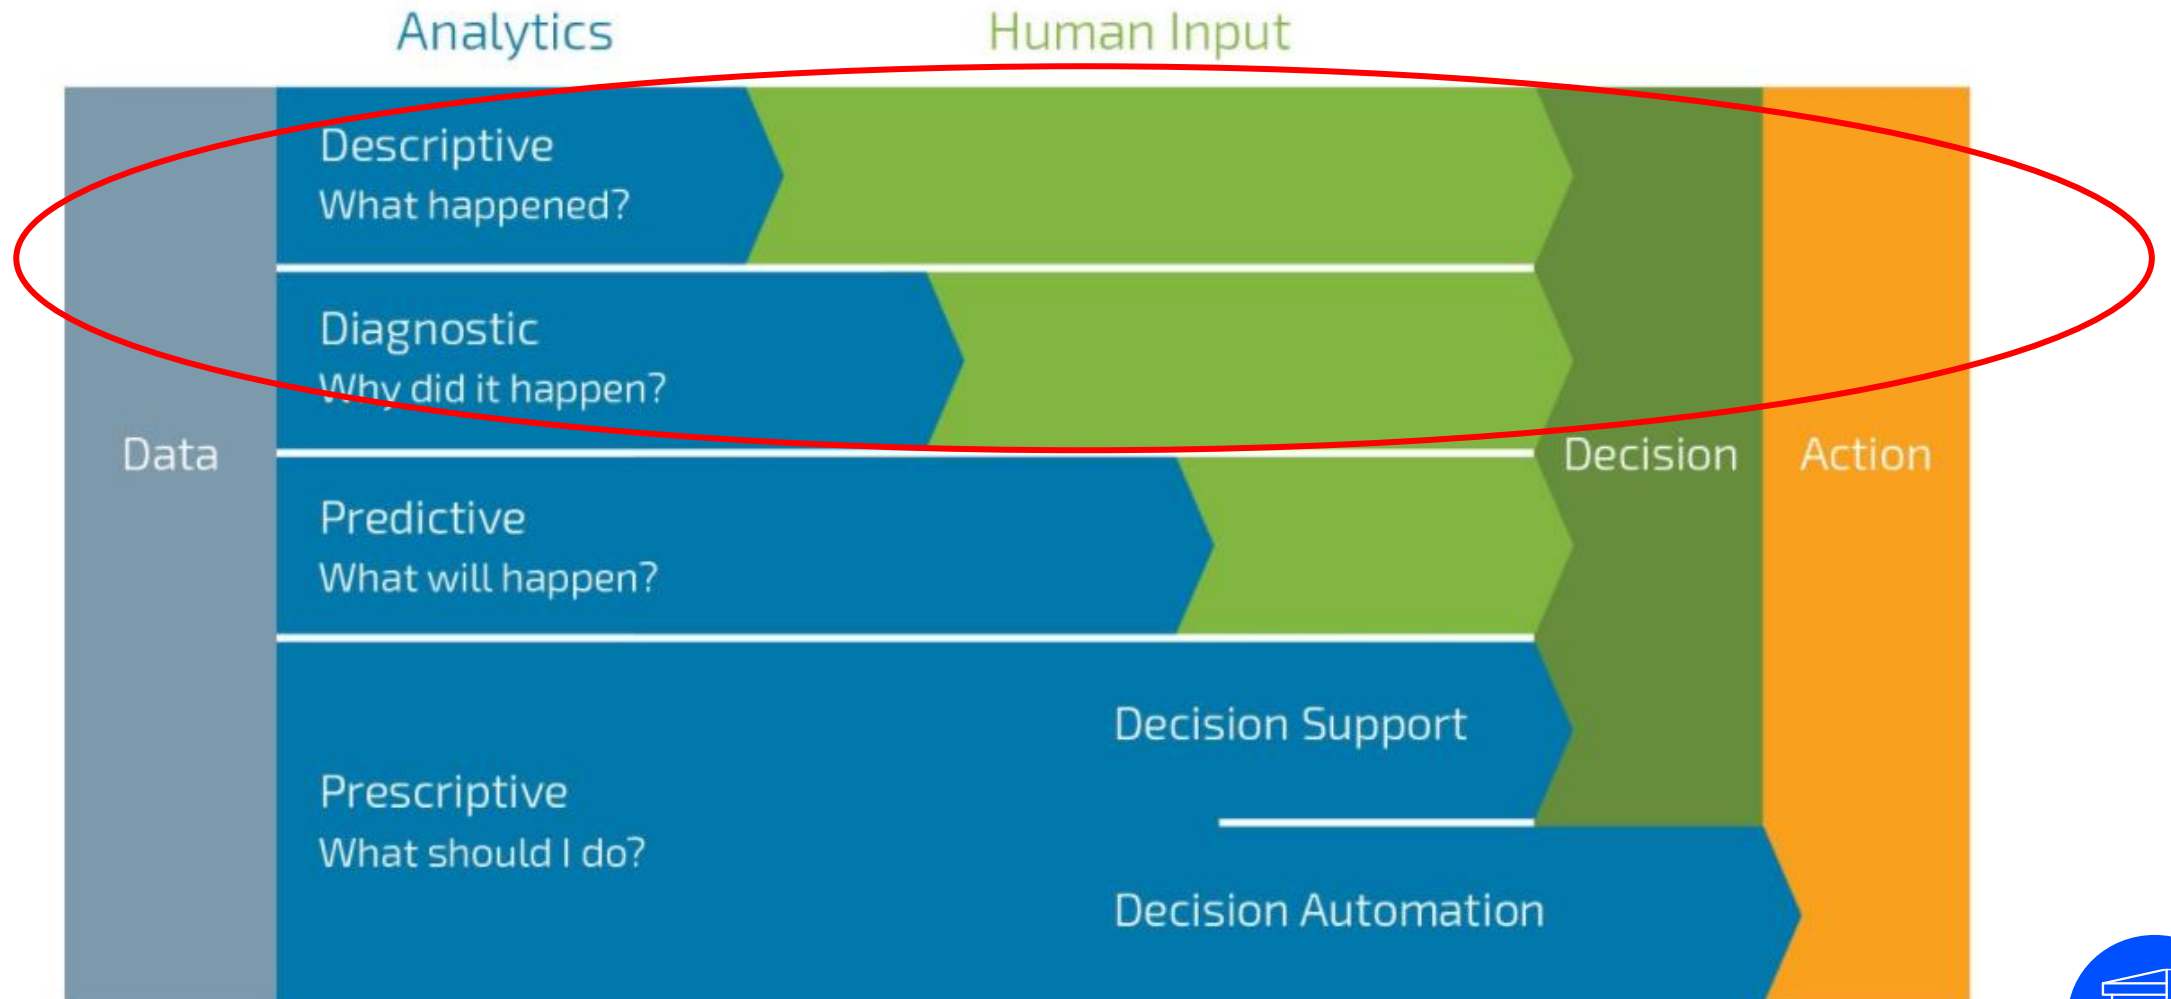

A man with grey hair and glasses, wearing a light-colored shirt and a dark jacket, is looking down at a tablet computer he is holding with both hands. The entire image is overlaid with a semi-transparent blue filter. In the background, there are blurred images of what appear to be data screens or server racks. Two white rectangular boxes are positioned on the left side of the image, containing the text 'Data' and 'Analytics & Trends' respectively.

Data

Analytics & Trends

Analytics Capabilities Framework

Data Analytics & Trends – Self Service

- Self-service BI empowers business users to:
 - ▶ Explore data
 - ▶ Generate insights as well as to create dashboards or reports, without relying on IT, data scientists or analysts.
 - ▶ make better decisions, regardless of analytics skills.
- Automation
- Balance governance with timely and accurate decision making
- Easily integrate multiple data sources
- Quickly share data insights with stakeholders
- Create apps and reports on demand
- Support a mobile-enabled team

Data Analytics & Trends – Traditional vs. Active

Traditional BI

vs

Active Intelligence

- Historically focused
- Designed to Inform, not compel action
- Report Based – Point in Time
 - ▶ Users must be **Proactive**
 - ▶ More manual to get insights
 - ▶ Designed for periodic reporting and usually requires additional analysis

- Real-time focused
- Designed to compel action
- Data is updated frequently
 - ▶ Users can be **Reactive**
 - ▶ Promotes Self Service
 - ▶ Push Alerts / Subscriptions
 - ▶ Designed to trigger immediate actions

Data Analytics & Trends - Mobility

- Native Mobile Apps
- Leveraging SaaS Platforms / Security
- Offline capabilities
- Notifications / Alerting
- Ease of Use / Design

Examples

The image shows a person's hands holding a tablet that displays a table titled "Online backup services compared". The person is also holding a pen over a spiral notebook. The background is a blue-tinted image of a desk with papers and a pen.

Getting Started

Making Informed Decisions

Getting Started

- Step 1: Identify roles in the organization
- Step 2: List 3-5 questions that individuals in these roles need to answer on a regular basis to be most effective in their roles
- Step 3: What data or information do they need readily available to make the most informed decisions?
- Step 4: What percent of this data do they currently have?

Questions?

Thank You!

Appendix

Getting Started

- **Step 1:** Identify personas / roles in the organization
 - ▶ Consider positions at various levels of the organization (field level, mid-range, executive)
- **Step 2:** List 3-5 questions that individuals in these roles need to answer on a regular basis to be most effective in their roles
 - ▶ Examples:
 - Procurement: How much of product X should I purchase?
 - Project Manager: Is my project on track to be completed in X days?
- **Step 3:** What data or information do they need readily available to make the most informed decisions?
 - ▶ Examples:
 - Procurement: Product needs based on project backlog and forecast to maximize order savings and ensure inventory availability based on project milestones
 - Project Manager: Burn rates, labor hours (internal and subcontractors)
- **Step 4:** What percent of this data do they currently have?
 - ▶ Differentiate between what they have access to, but requires time to manually prepare and what is automatically consolidated and available for analysis without manual effort

Key Practices for Success

- **Data Analytics** - A key set of operational and strategically oriented reports and dashboards, using defined KPIs for the purpose of assessing the performance of the business.
- **Data Governance** - A framework for enforcement and accountability of decision making that controls how data products are created, stored, and used effectively and efficiently throughout the organization.
- **Data Stewardship** - Ensures all aspects of the system are managed in relation to data governance principles to maintain a high level of data quality and value.
- **Backlog Management** - Consistent process for identifying, defining, developing, testing, and deploying required analytic applications.
- **Training & Mentoring** – Not only technical, but data literacy training
